B1 Usability Package

PARTNER

Tesselar

BayWa r.e. is a Mexican company with more than 70 employees that distributes photovoltaic products. Despite having SAP Business One in its tools for more than a year, the company felt that it needed more information to make decisions and enhance ERP, so it was decided to implement B1UP.

Customer's Challenges

- Virtually the entire organization, being SAP Business One users, had their limitations (time, information analysis, ...).
- Mainly in automation, many of the processes at the ERP level were manual, or through native SAP procedures, more complex (development of queries, their execution, ...).

Solution

- B1UP does not set limits and gave them the opportunity to create the desired dashboards.
- B1 Dashboards have been implemented in all areas for all kinds of purposes - process automation, reporting, daily monitoring of the operation and management of all areas of the companies.

Results

- Fewer operational errors.
- Fewer "clicks" used to perform an activity.
- Greater and easier access to information for decision making.

"WE HAVE IMPLEMENTED BI DASHBOARDS IN ALL OUR AREAS, FOR ALL KINDS OF PURPOSES: PROCESS AUTOMATION, REPORTING, DAILY MONITORING OF OUR OPERATION AND MANAGEMENT OF ALL AREAS OF OUR COMPANIES."

Lucía Muñoz Anaya, System Manager, BayWa r.e.
