FEATURED PARTNER

Thinc

For over 45 years Nene Storage Equipment, a UK family-owned business, is focused on creating bespoke storage solutions for organizations across the UK and Europe, as well as overseeing an extensive Industrial Property portfolio. Their experts take care of warehouse design, racking maintenance, asset management, installations, racking inspections, racking hire and even sign printing, making them a true one-stop-shop for all the warehouse storage needs.

Customer Challenges

- Our old systems were time-consuming and held us back from making the most of new business opportunities.
- There was no flexibility in its user interface or workflow. We had to follow processes that contradicted our working practices.
- Accessing data such as price lists and stock levels at the point of sale was convoluted and made quotations and orders a time-consuming and error-prone exercise

Solution

- We implemented B1UP alongside our SAP B1 solution.
- Over time, Nene have extended the use of the Boyum suit to include CRM for outlook and Produmex scan to further improve our efficiencies across more areas of the business.

Results

- Not only were we able to work faster, but we also reduced errors with the use of validations and mandatory field markers.
- The ability to introduce our own workflows and customize UIs has translated into considerable time savings and a significant reduction in manual/human errors in the system

"WE WERE IMMEDIATELY ABLE TO TAILOR EVERYTHING FROM THE UI TO THE WORKFLOWS TO MAXIMIZE EFFICIENCY IN ACROSS ALL DEPARTMENTS"
